

Heap Sort -

Binary Tree - Tree \rightarrow nodes \rightarrow 0/1/2 children.

leaf node - Node ^{with} 0 children

~~ACB~~ Almost Complete Binary Tree -

Nodes insert karo \rightarrow left direction se karo.

Heap ① ACBT

② Max heap (parents > child)
Min heap (parents < child)

parents.val > child.val.

YES

YES

Min Heap ??

Heapify - Array $\xrightarrow{\text{convert}}$ Max/Min Heap

Convert to Max Heap:-

10 20 15 12 40 25 18

→ Represent in the form of ACBT.

① Start from last non-leaf node.

② parent > child.

10 ← Heapify

H/W -- Convert array to min heap.
