

Quick Sort = Divide & conquer technique.

Note-

① pivot element -

↓  
pick a pivot element.

↓  
Array ka test ya  
Last.

35 50 15 25 80 20 90 45  
↑ pivot (P) (Q) ↑

pivot → 35

① P, Q

② P → arr[P] ≤ pivot.

Q ← arr[Q] > pivot.

③ Chk if p & q have crossed  
each other.

↳ swap (pivot, arr[q])

④ Chk if p & q have not crossed  
each other.

↳ swap (arr[p], arr[q]).

↓

35 20 15 25 80 50 90 45

P → P → P → (P) ✗

(Q) ✗

Apply algo.

25 20 15

≤ 35
